

A SUSTAINABLE SHIPPING PLATFORM IN A ZERO EMISSIONS WORLD

Hafnia's climate strategy shows a clear ambition and commitment to be a leading company in the transition to greener shipping. Contributing to combatting climate change and minimising our impact on ecosystems is a key priority for Hafnia.

Hafnia has strengthened its governance framework and disclosure and introduced more aggressive targets to succeed in our ambition to combat climate change. Reducing emissions and striving for an energy transition towards renewables will be at the core of Hafnia's actions for the years ahead.

The shipping industry is confronted with the most significant challenge it has ever faced, and this will be a long journey that we, in Hafnia, believe can be navigated successfully, thanks to changes in technology and innovation and supported by cross-industry collaboration as well as regulations. While the shipping industry is making progress in finding sustainable solutions from alternative fuels to improved ship designs, Hafnia is also working on various fronts that will deliver immediate impact while continuing to strive for long-term solutions.

Climate change prioritised from the top

The governance of our ESG and climate strategy is anchored with the Board of Directors, which oversees climate-related issues and progress on all our climate-related initiatives.

Accelerating our commitments and targets around five climate strategic pillars

In order to achieve its climate change ambitions, Hafnia has introduced in 2022 five climate strategic pillars including more aggressive commitments and emission targets.

Improving emissions' transparency

Hafnia provides our teams and customers with improved transparency on their carbon footprint as a better foundation for making informed choices relating to decarbonisation.

Optimising our vessels' performance

Hafnia tests and implements numerous energy-saving initiatives, which result in overall fuel savings and improved efficiency.

Achieving the 2030 IMO target ahead of schedule

Hafnia's intends to comply with IMO's 2030 targets by 2028 thanks to a combination of energy savings measures, including physical energy-saving devices and selling and replacing vessels with more energy-efficient vessels.

Driving the business towards net zero by 2050

Over the long term, Hafnia's priority is to build a successful business, playing our part in the energy transition that supports the Paris Agreement's goals by reducing emissions, scaling up renewable energy investments, and building new low-carbon solutions for shipping.

Leading long-term industry changes

As part of our commitment to innovation, Hafnia is continually exploring alternative fuels and more environmentally friendly solutions.
